Sandbox:- It is used for experimentation, as it provides us to execute code, browse the web without accessing host system, Production data & cloud

DBIM:- Breakdown problem to bite-sized, high impact usecases & deliver each one in a repetable, standardized way.

↓
Economic

Customer. Customer purchases the product
Consumer. Consumer is consumes the product.

Eg:- ~~Customer makes a financial transaction~~
Customers always pay for the goods (&) services
Consumer may (&) may not pay for them.

Eg:- Parent buying toys is customer, child playing with toys is consumer.

	Established way	DBIM way
Delivery approach	Linear, Big bang	Bite-sized, incremental
Speed to business value	Delayed RoI	Faster, early, repetable
prioritization	Intution-driven	Practioners-driven Scoring
Asset creation	Limited	Reusable, by design.
RoI	Delayed	Faster (&) tangable

Page No:
Date:

Six stages, one flow:- (6) stages.

(1) Discovery → (2) Business Validation → (3) use case design → (4) prioritization (5) solution

(6) production & scale ← (5) Development & Orchestration.

Eg: ORDER-TO-CASH:-

(1) Manual order validation

(2) pricing (&) contract discrepancies.

(providing discounts to some one, not for some one etc.)

(3) Missing documentation (billing delayed etc.).

(4) Fragmented work flows (low productivity, inconsistent decisions)

(5) No end-to end visibility

(poor cash forecasting, long days sales outstanding).

How it prioritized (Scoring)

(1) Business Value → (2) feasability → (3) customer relevance

scalability & reuse. ← (5) time to readiness (4)

SSOT - one Authoritative location, stores (&) manages critical information for an organization.

Single source of truth.

→ This practice eliminates data inconsistencies (&) ensuring all systems, departments, employees access the same accurate (&) up-to-date data from refence point.

Page No :
Date :

2 types:

(1.) Enterprise SSOT:- Build one single source of Truth across HR, Finance, Marketing, Sales; then build on top of it.
45 - 60 weeks for, first business value

(2) use-case SSOT:- Take Require data (&) build required SSOT, (&) go for next use case.
6 - 10 weeks for, first business value.

BITE - SIZED MVP

1. Order validation management
2. Exception management
3. Automated Charge Capture
4. Revenue Leakage Detection.
5. Payment Reconciliation
6. Revenue operations Copilot
7. Autonomous Revenue Ops. [6 usecases + additional Reusability]

Reusable for organization benefits.

MVP:- MVP - minimum Viable product

Problem:- Computer secretary manually checks every order against pricing, contracts, inventory & policy.

Task:-

problem:- IT employees place duplicate orders, because asset request are scattered across email & spreadsheets.

Score:

Impact	- 5	Urgency	- 5
Feasability	- 4	Risk	- 3
Strat-alignment	- 5		

Page No :
Date :

Weakest: Feasibility - Integrating emails, spreadsheets (&) existing asset records may require some effort.

MVP1 scope: Detect duplicated laptop (&) monitor request before an order is placed.

Out of scope: Software licenses (Adobe etc..) MS office etc.) Replacement parts, Asset Inventory optimization

MVP2: Extend duplicate detection of Software licenses, replacement parts.
